Principal Certification three stream work program

Principal Certification is based on integrity, credibility and the authentic leadership of principals through evidence of the Australian Principal Standard in practice. The development, implementation and ongoing management of Principal Certification occurs through the interdependent functions of the three Portfolio, Operations and Integrity streams. Collaboration and interconnectivity between the work streams is inherent in the Principal Certification model and integral to successful delivery of a quality assured, publicly accountable Australian Principal Certification Program.

- **Portfolio**: the design of valid and reliable assessments of principals’ professional practice and knowledge through the Assessment and Evaluation Framework that guides the gathering, analysing and presenting of evidence.

- **Operations**: the provision of policies and procedures to coordinate the making and documenting of decisions that govern operations.

- **Integrity**: the measures that deliver a consistent and credible Certification process and demonstrate that assessment is quality assured.
